## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action;
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-13, 24, 26, 28-29 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Umeda et al. (US 6645646).

Umeda et al. disclose a magnetic recording medium having a ferromagnetic layer, a non-magnetic coupling layer, and a magnetic layer wherein a magnetic bonding layer is provided between the magnetic layer and the coupling layer and/or between the ferromagnetic layer and the coupling layer (see abstract). The reference teaches that the magnetic bonding layer has a Co or Fe concentration that is higher than that of the ferromagnetic layer and the magnetic layer (col. 4, lines 4-37). The reference is silent with regard to the use of a bonding layer which contains 64-83 at% Co and with regard to the claimed relationship between the exchange coupling of the medium at 64 and 83% Co.

Umeda et al. teach that the relative concentration of Co or Fe in the bonding layer to that in the magnetic and ferromagnetic layers affects exchange coupling between the ferromagnetic and magnetic layers and ultimately affects thermal stability (col. 11, lines 25-28). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to optimize

Application/Control Number: 09/944,193

Art Unit: 1773

the amount of Co or Fe in the bonding layers taught by Umeda et al. since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

With respect to the relationship between exchange coupling of the medium at 64% Co versus 83% Co, it is noted that this particular magnetic property depends on factors that are external to the medium (e.g. presence of an applied field and the strength of that field among other things). Exchange coupling is not merely a material property. Thus, the aforementioned limitation is a function of how the medium is *used* not just what its structure and composition is. For this reason, it is the Examiner's position that the aforementioned limitation does not patentably distinguish the claims over Umeda et al. because the structure taught by Umeda et al. is capable of meeting the claimed exchange coupling limitations in the presence of an appropriate applied field.

## Response to Arguments

3. Applicant's arguments filed 8/3/04 have been fully considered but are not persuasive.

Umeda et al. does not specifically disclose the claimed relationship between the exchange coupling of the medium at 64 and 83% Co. However, this limitation does not patentably distinguish the claims over Umeda et al. for the reasons cited in paragraph number 2, above.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Holly Rickman whose telephone number is (571) 272-1514. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (571) 272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
